Maternal screen First trimester (Dual marker test) FMF Approved

<u>Investigation</u>	<u>Observed Value</u>	<u>Unit</u>
 Free Beta HCG (CLIA)	30.16	IU/L
 PAPPa (Pregnancy Associated Plasma Protein) (CLIA)	1.982	IU/L
Risk factor calculated by	SSDW	
Age Risk (Trisomy 21)	1:414	
Trisomy 21 (Biochemical + NT risk)	<u>Screen Negative,1:67587</u>	
Trisomy 18 (Biochemical risk)	<u>Screen Negative,1:76333</u>	
Trisomy 13 (Biochemical risk)	<u>Screen Negative,1:76333</u>	

Comments :NOTE: Suggested Pregascreen Quadruple if 14 to 22.6 weeks test code (D0040_Reflex).

Please refer next page for statistical calculation final report and interpretation.

Test Information:

1. Statistical risk factor calculation for Trisomy 21 (Down's syndrome), Trisomy 18 (Edward Syndrome) and Trisomy 13 (Patau Syndrome) has been done using **Fetal Medicine Foundation(FMF) approved assays**.
2. The statistical risk evaluation requires Maternal age to be decimalised for months, to be represented as Age at sampling & conversion of maternal hormonal values to mean of medians(MOMs). The MoMs are further calculated using Indian medians, which are established from more than 10,000 patients and are periodically updated.
3. Statistical evaluation enclosed being more informative, the reference ranges for the biochemical parameters are not quoted on the report.
4. All software may not give similar risk factor for the similar data.

Interpretation guidelines :

Disorder	Screen positive Cut off (ACOG 2007)	MOM Cut off (ACOG 2007)	Remarks
Trisomy-21	1:250	Free BHCG: > or = 1.98 PAPPa:< or = 0.43	Confirmatory tests needed under doctor's advise
Trisomy-18 / Trisomy-13	1:100	Free BHCG: < or = 0.5 PAPPa: < or = 0.4	Level-III ultrasound needed for confirmation

1. It is advisable to ask for repeat calculations (not the test), in case history provided is not correct.
2. 1:250 risk factor means : Out of 250 women having similar results and history, 1 may have abnormality
3. For better reliability of results, it is advised to carry out analysis between 11 and 13 weeks.
4. In monozygous chorioncity cases combined risk will be generated and for the dizygous cases separate risk for twins will be generated.

Limitations: As the test is screening test, confirmatory test like amniocentesis or CVS should be considered based on findings under advise of your gynecologist.

Associated Test: Integrated test; NIPT/S – Non Invasive prenatal screening test – Genetic screening from Maternal blood for aneuploidies – Trisomy 21, 13, 18

Metropolis Healthcare Limited

First Trimester Screening results

Patient data

Name and surname:	MRS ANWESHA DASH 69482	Weight:	87.2 Kg.
Patient ID:	242_230183000552887	Race/Ethnicity:	Indian
Date of birth:	16/07/1991	Age at EDD:	32.4 years
Estimated Delivery Date	25/12/2023	Insulin dependent diabetes:	Not informed
Gestational age calculation:	Biometry (66 mm of CRL)	Smoker:	No
Pregnancy Type:			
Software:	SSDW Version 6		

Biochemical data

Sampling Date:	18/06/2023	Gestational age:	12 weeks and 6 days
Sample ID:	0256315769		
Free beta hCG:	30.16 IU/L	1.13 MoM	
PAPP-A:	1.982 IU/L	0.6 MoM	

Ultrasound data

Ultrasound date:	18/06/2023	Gestational age:	12 weeks and 6 days
CRL:	66 mm		
Nuchal Translucency:	1.1 mm	0.65 MoM (Truncated at 0.78 MoMs)	

Dichotomous markers

Absent nasal bones=No. Abnormal Ductal flow=No. Tricuspid regurgitation=No.

Risk report (At screening date)

Risk type	Probability	Result	Graphic representation
Trisomy 21:	1:67587	LOW RISK	1:67587 250
Trisomy 18/13:	1:76333	LOW RISK	1:76333 100
Trisomy 21 age risk :	1:414		

Observations

NOTE: Suggested Pregascreen Quadruple if 14 to 22.6 weeks test code (D0040_Reflex).

LOW RISK.

The risk calculations are statistical approaches and have limited diagnostic value.

The calculated risk by the software depends on the accuracy of USG details and patient details provided
